File System Structure Design

A structure of file system which can store the uploaded files by users.

```
1    root: /home/IT_Project/html
2
3    /html:
4        /file:
5            /temp:
6            /userData:
7                /[userID]:
8                    /userUpload:
9                        /docInsert:
10                            <file>
11                        /customizeFile:
12                            /alphagSection:
13                                /reserved:
14                                    <doc_sys_reserved.html>
15                                <files>
16                            /betagSection:
17                                /reserved:
18                                    <doc_sys_reserved.html>
19                                <files>
20                            /charlieSection:
21                                /reserved:
22                                    <doc_sys_reserved.html>
23                                <files>
24                            <files>
25                    /userSys:
26                        <profliePic.jpg>
27                        <doc_sys_reserved.html>
```
